Priority

Field code
`%{issue.priority}`

Read

Returned value	**Name** of the current **priority**
Output data type	TEXT
Example output	Blocker

The priority name will be returned in **Jira's default language**. If a **translated** value should be returned in general this setting can be updated in the configuration of the xApps library.

Write

Valid text input	**Name** of a **priority** (e.g. Blocker, Critical, Major, etc.)
Valid numerical input	(0 = highest priority, 1 = second highest,... n = lowest)
Example input	Blocker
