Details of the last comment

Use case

This calculated field returns the **user** who has last commented on the issue and the **comment** itself**.**

Configuration

1 Create a new **Calculated Text Field (by JWT)** custom field and name it properly.

> Providing a description will help you to identify what the custom field does but this step is **optional**

2

Parsing mode

Select **Basic text** as parsing mode.

3

Parser expression

Add the following expression:

Text to be parsed for Calculated Text Field:
`%{issue.lastComment.author}: %{issue.lastComment}`

4

Add the field to the relevant view **screens.**

> **Remember**: All calculated fields are **read-only** and cannot be manually updated on a create or edit screen.

5

Check the results

Once configured and added to an issue screen, the result will look like this:
