Issue status

Field code
`%{issue.status}`

Read

Returned value	**Name** of the **current status** in Jira's default language
Output data type	TEXT
Example output	Open

The status name will be returned in **Jira's default language**. If a **translated** value should be returned in general this setting can be updated in the configuration of the xApps library.

Write

Valid text input	**Name** of a **status**
Valid numerical input	
Example input	Resolved

You can use this virtual field to trigger a transition, provided conditions and validators pass, and a transition is available to the **specified status**.

This field can only be used in the Update issue fields post function.

Writing into this field is a **legacy** function.

Please use one of the following methods to update workflow statuses:

- Transition issue post function for **workflows**
- Transition issue action for **automation rules**
