dayOfTheWeekToString()

This function returns the **day of the week** of **any given timestamp** in **text** form.

Syntax
`dayOfTheWeekToString(timestamp, timeZone, language) #Output: Text`

Examples

Parser expression	Description
`dayOfTheWeekToString({issue.dueDate}, LOCAL, USER_LANG)`	This example returns the **day** of the **week** as text. If the due date was set to **March 25th, 2020 23:15** and the user's Jira language was set to **English**, the output would be **Friday**.

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`timestamp`	NUMBER	The parameter must be valid **timestamp**. Usually this value is retrieved from a field (e.g. due date, created date).
`timeZone`	TIMEZONE	The **time zone** used for the calculation.
`language`	LANGUAGE	The **language** used for the calculation.

Output

This function returns a TEXT

If you need the day of the week as a **number**, please see **dayOfTheWeek()**.
