isBulkTriggeredTransition()

This function returns **`true`** only if the current transition was **triggered by Jira's bulk operation feature**.

Syntax
`isBulkTriggeredTransition() #Output: Boolean`

Examples

Parser expression	Description
`isBulkTriggeredTransition()`	This example returns the **`true`** if the current transition was triggered by a bulk-transition operation.

Output

This function returns a BOOLEAN

This function is useful for **bypassing validations** or **post functions** when a transition is being executed by a **bulk update operation**.

If you want to check a transitions whether it is triggered by a **JWT** post function, check out isJwtTriggeredTransition()
