- [Example: Block transition until all sub-tasks are in a specific status category](#)
- [Other examples of that function](#)
- [Related Usage Examples](#)

Features used to implement the example

- [Boolean condition and validator with math. date-time or text-string terms](#)

Example: Block transition until all sub-tasks are in a specific status category

In this example, moving the current issue to status **"Done"** should only be possible when all sub-tasks are in status category **"Done"** - otherwise the transition button should be hidden.

For this, a [Boolean condition and validator with math. date-time or text-string terms](#) is needed on the transition to **"Done"** on the current issue (the parent).

The configuration will look like this:

Boolean expression to be evaluated:

[Line 1 / Col 63] [Syntax Specification](#) and [Examples](#) ?

1

count(filterByPredicate(subtasks(), ^{%00144} != "Done")) = 0

Logical connectives: and, or and not. Alternatively you can also use &, | and !.

Comparison operators: =, !=, >, >=, < and <=. Operators ~, !~, in, not in, any in and none in can be used with **strings**, **multi-valued fields** and **lists**.

Logical literals: true and false. Literal null is used with = and != to check whether a field is initialized, e.g. {00012} != null checks whether Due Date is initialized.

NUMERICAL AND DATE-TIME TERMS

Numeric and Date-Time field values: insert field codes with format {nnnnn}.

Start typing to get the list of available fields

Insert Numeric Value

Valid date-time literal formats: yyyy/MM/dd [hh:mm] or yyyy-MM-dd [hh:mm]. Time literals use format: hh:mm.

There is a set of [mathematical functions](#) and [time macros and functions](#) available to be used in your expression.

TEXT-STRING TERMS

Text-String field values: insert field codes with format {%nnnnn} or {%nnnnn.i} for referencing levels in cascading select fields (i = 0 for base level).

Start typing to get the list of available fields

Insert String Value

String literals: written in **double quotes**, e.g., "This is a string literal."

String concatenation: use operator '+' to concatenate string values, e.g., "The summary of issue with key " + {%00015} + " is \" + {%00000} + "\"."

Escape character: character \" is used with characters \"\", \"n\", \"r\", \"t\", \"f\" and \"b\" to invoke an alternative interpretation.

There is a set of [string functions](#) available to be used in your expression.

Boolean expression to be evaluated is: `count(filterByPredicate(subtasks(), ^{%00144} != "Done")) = 0`

Note that:

- `%{00144}` is field code for field **"Issue status category"**

After adding the condition, the issue cannot be transitioned as long as there are sub-tasks that are not yet in status category **"Done"**:

Updated: Just now

As soon as all sub-tasks are in status category **"Done"**, the parent issue can be transitioned as well:
