

projectId()

This function returns the **ID** of the **project** with a given **name** or **key**.

Syntax

projectId(nameOrKey) #Output: Number

Examples

Parser expression	Description
<code>%{projectId("My project")}</code>	This example returns a number representing the ID of the project with the name My project e.g. 10000

Parser expression	Description
<code>%{projectId("MP")}</code>	This example returns a number representing the ID of the project with the key MP e.g. 10000 . Please note that the ID of the project with the key MP is returned, if such a project key exists, even if there is a project with the name MP (see hints below).

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
nameOrKey	TEXT	The name of the project or its key.

Output

This function returns a

If there is no project with the given key or name, the function returns

Use this function to retrieve a project ID for a given project key or name.

Note that a partial project name will also work, but be aware that the function will return the ID of the project with an exact match of project key or project name, if existent, and otherwise will return the ID of the first project found.

Prefer project keys over project names, and prefer full project names over partial ones.

Use case
