

Bulk delete spaces

Delete multiple spaces in a single go.

Your browser does not support the HTML5 video element

How to select multiple spaces

Many of the actions you can perform on individual **spaces** as **bulk actions**.

Simply browse to the [space navigator](#) and **select** multiple spaces as if you were selecting multiple files in a file explorer.

- **Windows users:** hold the **CTRL** key and select the entities or select an entity and hold the **shift** key for faster multiple selections
- **Mac users:** hold the **command (cmd)** key and select the desired entities.

After selecting the spaces, right-click on one of the selected items and you will see all available bulk actions.

Select a **single** space and **hold the shift key** while selecting another space for a quicker selection of all pages in between.

1

Right-click on the space selection or, **hover** over one of the selected spaces and click on the **ellipsis** menu "..."

2

Select the **Delete** action.

3

Click on **Delete**.

Deleting spaces immediately and **permanently** deletes all pages, blog posts, comments, and attachments.

Unlike pages and blogs, deleted spaces **do not** go to the Trash. You **will not** be able to recover them later.

If you still have questions, feel free to refer to our [support](#) team.
