

Field value validation

Use case

Return "Valid" if the custom field value matches the regular expression and "Invalid" if it does not.

Expression

[Create and configure a Smart field](#) using this expression in **General** parsing mode:

```
%{matches(%{issue.cfnnnnn},"6|7|8|9") ? "Valid":"Invalid"}
```

The values entered as arguments in the *matches()* parser function can be replaced with different values or with a regular expressions to validate differently the value of the custom field.

Please, note that it is necessary to replace *nnnnn* with the ID of the custom field.

Used parser functions

- [matches\(\)](#)
