Sum of original estimates of issues under epic's parent

Use case

Return the **sum of the original estimates of the issues under the epic's parent** in hours only in the epic's parent view.

Expression

Create and configure a Smart field using this expression in **General** parsing mode:

```
%{%{issue.issueType} = "Initiative" ? sum(append(fieldValue({issue.originalEstimate}, union(issuesFromJQL
("issuekey in portfolioChildIssuesOf("+%{issue.key}+")"), issuesUnderEpic(issuesFromJQL("issuekey in
portfolioChildIssuesOf("+ %{issue.key} +")")))), [0] )) / 60 : null}
```

We consider the epic's parent to be a Initiatiave in this expression, but it could differ depending on the Advanced Roadmaps issue type hierarchy. To adapt to your issue type hierarchy change the following part of the expression: " %{issue.issueType} = "Your Custom Issue Type"
"

Used parser functions

- sum()
- append()
- fieldValue()
- union()
- issuesFromJQL()
- issuesUnderEpic()
