

# Operations with field values from sub-tasks

## Use case

Return the result of **summing the multiplication of the field values** of two Number fields **in every sub-task** of the current issue.

## Expression

Create and configure a [Smart field](#) using this expression in **Jira expression** mode:

```
issue.subtasks.length && issue.subtasks.map( s => (s.customfield_nnnnn || 0) * (s.customfield_ppppp || 0)).  
reduce((a, b) => a + b)
```

Please, replace *nnnnn* and *ppppp* in the above expression with the IDs of the Number fields.
