

# Remaining budget

## Use case

Return the **remaining budget** after deducting the **expenses of the sub-tasks** to the **budget of the task**. The expenses and budget are represented in different Number custom fields.

## Expression

Create and configure a **Smart field** using this expression in **General** parsing mode:

```
%{{issue.cfnnnnn} = null ? null : {issue.cfnnnnn} - sum(append(fieldValue({issue.cfppppp}, subtasks()), [0]))}
```

Please, replace *nnnnn* with the ID of the Number custom field for the budget and *ppppp* with the ID for the Number custom field for the expenses in the above expression.

## Used parser functions

- `sum()`
- `fieldValue()`
- `subtasks()`
