

ATJ Release Notes 1.0.0

[Direct download from Marketplace](#)

Initial Marketplace Release

In the beginning there was **Jira Workflow Toolbox** (JWT) and now, almost **ten** years after the initial public release, used by more than 4000 active customers and 140 versions later, comes its natural descendant, **Automation Toolbox for Jira**.

The team at Decadis took a long time planning the development of **Automation Toolbox for Jira** as this new app had some very major prerequisites to fulfill - namely providing as much known and proven **JWT** functionality as possible in a non-workflow environment. It has been a daunting task, but, we hope for you as a user, worthwhile. Even though you need no prior knowledge of **JWT** to use **Automation Toolbox for Jira**, you can depend on the functionality designed and developed with many years of Jira app experience.

Where **JWT** has used the slogan "Turn your ideas into workflows" for many years, **Automation Toolbox for Jira** will hopefully help you to "Turn your ideas into automation rules" wherever and whenever these are appropriate. The possible use cases are endless.
