JWT Release Notes 2.5.1

Direct download from Marketplace

Improvements

- **Group picker performance improvement** (now using AJAX search instead of preloading all groups)
- The **position of a post function** does no longer affect its functionality except delayed issue transitions

Bug fixes

- **Update issue fields** post function: Using the standard type threw an error when updating a single group picker custom field
- **Check project property** condition did always return false for empty properties
- 3rd party integration: **Power Custom Fields Premium** app support stopped working
- Security Level through **Update issue fields** post function caused unreadable issues under certain circumstances
- **Compare text** validator did not work with multiline text
- Some functions related to **custom fields** were broken after updating to version 2.5.0
- The function **previousValue** did not always return the correct value for system fields
- Condition **Transition is triggered by Bulk Operation** did not work correctly
- **Previous issue status** field was not updated during the transition
- Editing a field's value in several post functions showed null in the configuration view
- The field **Epic name** did return the issue key of the epic instead of the name
