Features used to implement the example

- Calculated Text Field

Example: Number of linked bugs (with hyperlink)

Count the number of bugs linked to current issue and display the result as a hyperlink referring to the equivalent search results in the issue navigator.

A valid configuration for this **Calculated Text Field**:

Parsing Mode:

Basic

Basic mode: Insert field codes anywhere in the text, and they will be replaced with corresponding field values. Field code formats are `{nnnnn}`, and `{nnnnn.i}` for Cascading Select fields (i = 0 for base level).

Advanced

Advanced mode: Strings literals are written in double quotes ("This is a string."). Operator '+' is used to concatenate strings, and field codes are like in basic mode, e.g., "Issue key is " + `{00015}` + ". ". More information at [parser syntax documentation](#).

Text to be parsed for Calculated Text Field:

[Line 1 / Col 1][Syntax Specification](#)[Check Syntax](#)

1

`"<a href='"+{00169}+'/issues/?jql=issue%20in%20linkedIssues('"+{00015}+"')%20and%20type%3DBug'" + count(filterByIssueType(linkedIssues(),"Bug")) + "</a>"`

Start typing to get the list of availabe fields

Insert String Value

Start typing to get the list of availabe fields

Insert Numeric Value

Text to be parsed

- `"<a href='"+{00169}+'/issues/?jql=issue%20in%20linkedIssues('"+{00015}+"')%20and%20type%3DBug'" + count(filterByIssueType(linkedIssues(),"Bug")) + "</a>"`

Note that:

- `{00169}` is the field code for **Jira Base URL**
- `{00015}` is the field code for **Issue key**

Once configured and added to an issue screen, the result will look like this:

Development / DEV-1
