Features used to implement the example

- [Set a field as a function of other fields](#)

Example: Unassign an issue when assigned to project leader

I'm trying to clear assignee field for one issue type in project with auto-assign to lead. I've create post-function in create transition but it doesn't allow to clear field. Then i set value to real-user name function reassigns issue to user, then i try to set value to "None" or "Unassigned" it leaves project lead as assignee

I have just released [Jira Workflow Toolbox](#) 2.0.22 which has the extra functionality of unassigning issues when writing "**Unassigned**" (case unsensible) into virtual field "**Assignee**".
