SINCE VERSION 2.7.0

This condition was introduced in version 2.7.0 and replaced the **A field is/isn't initialized (deprecated)** condition which had a limited subset of features.

Purpose

Using this condition you can make sure that one or multiple **fields either need to have a value or be empty** in order to execute a transition. The following options are available:

- A field **is required**.
- A field **must be empty**.

For **cascading select** fields **both levels** are being considered and need to have / not have a value.

Configuration Parameters

Selected fields:				
	Start typing to get the list of availabe fields			Add
	For cascading select custom fields both levels are required.			
	Fields required	**Condition**	**Additional options**	**Actions**
	My Date	is required		Edit Remove
	Checkbox - Issues to be created	must be empty		Edit Remove
