Features used to implement the example

- [Condition and validation on linked issues](#)

Example: Prevent issue from being closed if it has links of type "is blocked by" to open issues

I am trying to create a condition in my workflow that will not allow the issue to be closed if it has linked issues that block it and don't have the status "**Closed**". The background is that I am using the plugin Structure to arrange my issues. Using the Sync feature when I structure my project it adds blocked links to the issues. So I want to make sure that a parent issue can't be closed unless the child issue is closed.

You have to check "**Issue link types not selected are allowed**" and "**Issue types not selected are allowed**" using the [Condition on linked issues](#) condition or [Validation on linked issues](#) validator.

Other examples of that function
