

JWT Release Notes 2.2.35

[2017-03-23] Released **Jira Workflow Toolbox 2.2.35**

Improvements

- Added 2 new assignment modes to **Assign to project role**:
 - **previous user** in project role who has had the issue assigned.
 - **previous user** in project role who has had the issue assigned, or lacking that to **default user** for project role.

The 2 already existing modes "last user in project role..." don't reassign the issue when current assignee is in selected project role, while these 2 new modes do it.

Bug fixes

- **Issue #543** - Post function email with attachment not working at "**Create Issue**" transition
- **Issue #545** - Post-function **Copy cascading select field** didn't mimic the cascading value
- **Issue #546** - Epic Link can't be directly copied to Epic Link
Until now **Epic Link** only could be set using **Epic Name** as source value. Now it can also be set using another **Epic Link** value, or a string containing the **issue key** of an Epic issue.
