

# JWT Release Notes 2.2.31

[2017-02-14] Released [Jira Workflow Toolbox 2.2.31](#)

## Improvements

- Added **Display Format** configuration parameters for customizing the way fields [Calculated Number Field](#) and [Calculated Date-Time Field](#) are displayed.

## Bug fixes

- Current field has been removed from field code injectors in [Calculated Text Field](#), [Calculated Number Field](#) and [Calculated Date-Time Field](#), in order to avoid self-references in the expression for calculating field value.
- [Issue #506](#) - Error in [Create issues and sub-tasks](#) post-function when selecting **multiple issues** creation and leaving the seed expression empty.
