JWT Release Notes 2.2.19

[2016-09-08] **Released Jira Workflow Toolbox 2.2.19**

Improvements

- Added 3 optional additional actions to " Send an email" post-function:
    - Add *To* recipients as watchers of current issue
    - Add *Cc* recipients as watchers of current issue
    - Save email information into *Ephemeral String* fields (ES1...ES5), to be used in subsequent post-functions

Bug Fixes

- **HOT FIX**: Since version JWT Release Notes 2.2.16 features based on JQL queries might not work correctly when the number or issues returned by the JQL query is very high.
- " Send an email" post-function fails when there isn't any recipient for the email. Now, the post-function simply will not send any email.
