Features used to implement the example

- [Update issue fields](#)
- [Write field on linked issues or sub-tasks](#)

This example is considered **outdated**. Please head over to the one using our [Transition issues](#) post function [here](#).

Example: Moving sub-tasks to "Open" status when parent issue moves to "In Progress"

We see provision in [Jira Workflow Toolbox](#) to change parent issue's status when a sub-task's status changes. Similarly, is there a way to change a sub-task's status when its' parent issue's status changes? For instance, if parent issue status changes to **"In Progress"**, sub-task status change to **"Open"**.

Yes, you can do it inserting [Write field on linked issues or sub-tasks](#) or [Update issue fields](#) post-function in transition **"Start Progress"** of parent's workflow. In the case of [Update issue fields](#) you should use the following configuration:

Target fields and Source values: [?](#)
 Select the target fields that will be set and the source values for each of them.

Target field:

Summary - [Text]

Add

Add a field to be set in selected issues.

Target Field	Type of Value	Source Value	Don't Overwrite	Actions
Issue status	Parsed text (basic mode)	Open		Edit Remove

Target Issues:
 Select the issue(s) to be updated.

Issue Selection Mode:

☐ Current Issue
 ☐ Parent Issue
 ☐ Linked Epic
 ☐ Linked Issues
 ☒ Subtasks
 ☐ Sibling Subtasks
 ☐ Issues under Epic
 ☐ Sibling issues under Epic
 ☐ JQL Query
 ☐ Issue List

Subtasks of current issue. If current issue has no subtasks, nothing will happen.

Issue Type Filter:

Issue types to filter the selected issues. If nothing is selected all issue types are updated.

Issue Status Filter:

Issue statuses to filter the selected issues. If nothing is selected issues in any status are updated.

Resolution Filter:

Resolutions to filter the selected issues. If nothing is selected issues with any resolution are updated.

Additional options:

☐ **Enable email notifications** on issues to be written, according to applicable notification scheme.
☐ **Update issue immediately** after field writing. A specific entry will be created in issue history for each field writing.

Conditional execution:
 Optional boolean expression that should be satisfied in order to actually execute the post-function.
[\(Syntax Specification\)](#)

1

Leave the field empty for executing the post-function unconditionally.
 [Collection of Examples](#)

[Line 1 / Col 1]

Logical connectives: and, or and not. Alternatively you can also use &, | and !.

Comparison operators: =, !=, >, >=, < and <=. Operators in, not in, any in, none in, ~ and !~ can be used with *strings*, *multi-valued fields* and *lists*.

Logical literals: true and false. Literal null is used with = and != to check whether a field is initialized, e.g. {00012} != null checks whether Due Date is initialized.

String Field Code Injector:

Summary - [Text] - {%00000}

Numeric/Date Field Code Injector:

Original estimate (minutes) - [Number] - {00068}

[Check Syntax](#)

Once configured, the transition will look like this:

The following will be processed after the transition occurs

[Add post function](#)

1. Update the following target issues:

Subtasks of current issue.

Filter the target issues by:

Subtask Issue types: **any**

Statuses: **any**

Resolutions: **any**

Target fields and Source values:

Target Field	Type of Value	Source Value	Don't Overwrite
Issue status	Parsed text (basic mode)	Open	

This feature will be run as user in field **Current user**.
