

JWT Release Notes 2.2.28

[2016-12-15] Released [Jira Workflow Toolbox 2.2.28](#)

New Features

- New **read-only** virtual fields:

Field name	Type	Returned Value	Notes
Customer Request Type Name	Text string	The name of the Customer Request Type .	Field Customer Request Type returns the key , thus this read-only field is introduced in order provide a means to get the name of the Customer Request Type.
Tempo Account Key	Text string	The key of Tempo Timesheets' Account field.	Field Account returns the numerical ID , thus this read-only field is introduced in order provide a means to get the Account's Key .
Tempo Account Name	Text string	The name of Tempo Timesheets' Account field.	Field Account returns the numerical ID , thus this read-only field is introduced in order provide a means to get the Account's Name .

Improvements

- [Issue #460](#) - [Send an email](#) post-function now doesn't throw error when outgoing emails are disabled or not configured, but simply does nothing.
- Added operators `!=`, `!~` and `doesn't match` in [JQL Functions to Query on Project Properties](#).
- Now field Jira Software's **Spring** field can be set by writing the **numerical ID** of a Spring.

Bug Fixes

- [Issue #452](#) - Field "**Customer Request Type**" couldn't be set. Now, it can be set by writing on it the **key** (not to be confused with the *name*) of the request type.
- Since version [JWT Release Notes 2.2.26](#) [SHOW](#) links didn't work in the parser help available in post-function [Set a field as a function of other fields](#).
