

# JWT Release Notes 2.2.26

[2016-11-25] Released [Jira Workflow Toolbox 2.2.26](#)

## New Features

Added 2 new read-only virtual fields:

Field name	Type	Value returned when cast to string	Examples
<b>Current transition</b>	Text string	When used in a validation or a post-function: the <b>name of the transition being executed</b> . In other cases: a comma separated list with the names of the transitions departing from current status.	In a validation: <i>Start Progress</i>  In a condition: <i>Start Progress, Resolve Issue, Close Issue</i>
<b>Target status</b>	Text string	When used in a validation or a post-function: the <b>name of the target status of the transition being executed</b> . In other cases: a comma separated list with the names of the target status of the transitions departing from current status.	In a validation: <i>In Progress</i>  In a condition: <i>In Progress, Resolved, Closed</i>

## Improvements

- Added parameter "**Conditional execution**" to post-functions "[Set a field as a function of other fields](#)" and "[Regular expression renderer](#)".
- Field **Account** of [Tempo Timesheets](#) can also be set using account's **name** or **key**. Until now only the numerical ID could be used.
- Added functionality for **disabling** options in post-functions "[Add or disable option in select list, radio button, multi-select list or checkbox](#)" and "[Add or disable option in cascading select](#)", which have been conveniently renamed.
- Added option for selecting issues through **Issue List** expressions in post-functions "[Read field from issues returned by JQL query or issue list](#)" and "[Update issue fields](#)", which have been conveniently renamed.
- Some minor UI improvements.

## Bug Fixes

- [Issue #445](#) - Field **Account** of [Tempo Timesheets](#) could not be set. This bug was introduced in version **2.2.18**.
- Virtual field "**Last comment**" always returned an **empty string** when used by a **condition** feature.
