Default Timeseries

This layout is used by the following built-in charts/reports and examples

---

c3.js Example

```
c3.generate({
        data: chartData,
        axis: {
                x: {
                        type: 'timeseries',
                        label: {
                                text: 'Months',
                                position: 'outer-left'
                        },
                        tick: {
                                format: '%d.%m.%y',
                                culling: {
                                        max: 25
                                },
                                fit: true,
                                multiline: false
                        }
                },
                y: {
                        label: 'Tickets'
                }
        }
})

// chartData - this variable contains the aggregated data for display and is generated by the script
```
