Based on the activity stream dashboard gadget, Activity offers similar filter options. With a few clicks the App can be adapted to the user's needs.

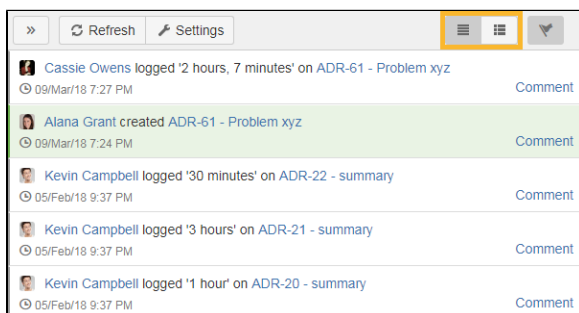

The following settings can configured and saved for each user:

- Enable/ Disable live notifications
- Use global settings
- Hide own activities
- Filter for project
- Filter via saved filter
- Filter for issue
- Filter for issue types
- Filter for Events
- Filter for users
- Invert current Filter (IS and IS NOT)

i All options support an autosuggest function.

Notification display settings

Use Settings to define the notification display details.

List View

Only creator, action, issue and the date/ time will be displayed.

Detail View

Same details as in list view but all changes, attachments and comments will be displayed in detail.

Highlighting & Commenting

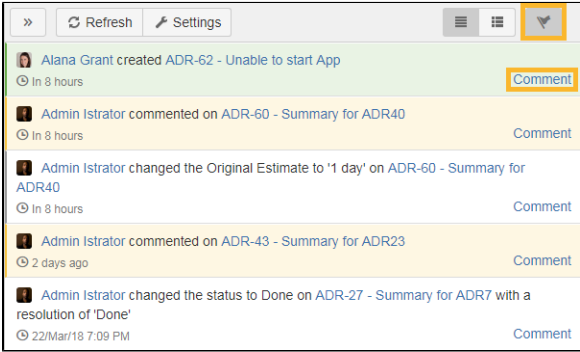

For a better overview, activities can be highlighted in different colors by clicking the flag in the upper right corner:

GREEN

New actions (Issues created or progress started)

YELLOW

Comments

- [Related Topics](#)

New issue comments can be added by clicking on Comment in the activity side bar.

Supported events

⚠ Due to a bug in the standard Jira Activity Stream, which we use to display events in Activity for Jira, the following table shows the supported/unsupported events.

Supported	Unsupported
✓ Attachment added	✗ Issue closed
✓ Comment added	✗ Issue opened
✓ Issue created	✗ Issue progress stopped
✓ Issue edited	✗ Issue reopened
✓ Issue progress started	✗ Issue resolved
✓ Issue transitioned
