

xCharts Release Notes 1.4.1

Release date	19 Apr 2018
Release type	MAINTENANCE
Highlights	

Starting with this version, the Calendar Week parameter is no longer formatted with the default c3.js formatting, that was:

before version 1.4.1

```
WEEK("CW%W") //week formatting - default c3.js
```

Replaced with this version:

starting with version 1.4.1

```
function formatWeek(d)
{
    if (d instanceof Date)
    {
        var momentDate;

        //we need this for checking if the chart is displayed in an iframe (Jira UI) or in a
        separate window
        var isInIframe = (window === window.parent) ? false : true;

        //use jira moment when available
        if (isInIframe) {
            momentDate = window.parent.moment(d);
        }
        //use included resource for displaying the week in charts to go - requires moment.js as
        a resource in the JS layout
        else {
            momentDate = moment(d);
        }

        return 'CW' + momentDate.week();
    }
    return '';
}
```

So if you have scripted charts that are using the **Time Picker** parameter, please change the layout and add the **formatWeek** function provided above to it, so that the chart can be properly rendered.

Bug fixes

- The incorrect week is being returned if the **Time Period Picker** is set to use **the week** as an input parameter.
- Charts are **not being loaded** in some browsers if opened through a link.
