

Condition and validation on linked issues

On this page

- [Purpose](#)
- [Example: Validating only issue links created in transition screen](#)
- [Configuration Parameters](#)
- [Usage Examples](#)
- [Related Features](#)

Purpose

Condition on linked issues and **Validation on linked issues** are features aimed to **set restrictions** on allowed issue links, or to **require existence** of certain issue links.

Example: Validating only issue links created in transition screen

Validation on linked issues checks up both, **previously created** issue links, and new issue links **created in transition screen**. When we want to check issue links created exclusively in transition screen, we should use **Boolean validator with math, date-time or text-string terms** with a boolean expression with function `transitionLinkedIssues()`. [Example: Validating only issue links created in transition screen](#)

Configuration Parameters

Almost any restriction or requirement you can imagine based on **issue links** and on **linked issues** is possible using "**Condition on linked issues**" and "**Validation on linked issues**". You can use the following parameters to set your restriction or requirement:

- **Issue link type**
- Linked issue's **issue type**
- Linked issue's **status**
- Linked issue's **resolution**
- Linked issue's **system field or custom field values**, making comparisons with current issue's field values, checking for **project role** or **group** membership of selected users (assignee, reporter, user pickers, ...), making **complex date-time comparisons** with date pickers, making also comparisons with **field's past values**, and much more.

Available Features

- **Condition on linked issues**: **hides** transitions depending on existent issue links with current issue.
- **Validation on linked issues**: **blocks** transitions **showing a custom warning message** to the user), depending on **previously existent** issue links, and issue links **created in transition screen**.

Usage Examples

Page: [Block an epic's transition depending on linked issues status and due date](#)

Page: [Block creation of issue type X if it has not been linked with link type Y to issue type Z on the "Create Issue" screen](#)

Page: [Block or hide a transition for an issue depending on its issue links](#)

Page: [Enforce linked issues in a specific project to be "Closed" before closing issue](#)

Page: [Prevent issue from being "Closed" if blocking issues aren't yet closed](#)

Page: [Prevent issue from being closed if it has links of type "is blocked by" to open issues](#)

Page: [Prevent issue from moving forward if it's dependent on non-accepted tickets](#)

Page: [Prevent transitioning when there is a blocking issue](#)
