Features used to implement the example

- **Copy parsed text to a field**

Example: Compose a parsed text including the "full name" or a user selected in a User Picker custom field

I'm using **Copy parsed text to a field** post-function to set the "**Summary**" of an issue. Is there a way to replace a user name given by a User Picker custom field with it's user's full name?

Let's suppose we have a User Picker custom field called "**Tester**" (field code **%{10501}**), and we want to update issue **Summary** including the **full name** of the user stored in that custom field.

We will use post-function **Copy parsed text to a field** with the following configuration:

Note that:

- **%{00000}** is field code for "**Summary**"
- **%{10501}** is field code for custom field "**Tester**". This field code depends on each particular Jira instance
- We are using **advanced** parsing mode
