Creating a Jira Service Desk internal comment

Features used to implement the example Example 1: Creating a Jira Service Desk internal comment Example 2: Copy transition's comment as new comment to a linked issue Example 3: Conditional execution of a post-function depending on comment visibility restriction Other examples of that functions Related Usage Examples

Features used to implement the example

- · Write field on linked issues or sub-tasks
- Update issue fields
- Add a comment

Example 1: Creating a Jira Service Desk internal comment

SINCE VERSION 2.2

There are two different ways to do it:

- Once created a comment (e.g., using "New comment" virtual field), you can use virtual field "Last comment's visibility restriction" for setting visibility restriction. You should write on this field value "internal" or "public" (without double quotes) for setting JSD (Jira Service Desk) comment's visibility.
- 2. A more direct way to do it is simply by adding string ": {visibility=internal}" or ": {visibility=public}" at the end of your comment's body when creating a comment with "New comment" or when editing a comment with "Last comment".

This is an example of the second option:

Text to be parsed in the example is: This is an internal comment.: {visibility=internal}

And here is the resulting comment:

You can also use the **name of a group** or the **name of a project role** as value of optional parameter **visibility**(i.e., ": {visibility=jira-developers}" or ": {visibility=Managers}"), and the visibility will be set for entered group or project role.

Example 2: Copy transition's comment as new comment to a linked issue

What should I do if I want to copy the comment from the actual issue from Field "Transition's comment - [Text]" to the linked issue into the field "New comment - [Text]? How can I add the visibility to the role "Users"?

You can do it using Write field on linked issues or sub-tasks post-function with the following configuration:

Source value that will be written into target field:	Select a source type: O field in current issue expression O parsed text (basic mode) parsed text (advanced mode) math or date-time [Line 1 / Col 30]
	1 %{00127} : {visibility=Users}
	Field codes with format &{nnnnn} will be replaced with the corresponding field values. With Cascading Select fields use &{nnnnn.0} Check Syntax and &{nnnnn.1} for referencing base level and child levels respectively. String Field Code Injector:
	Transition's comment - [Text] - %{00127} Field Code for Current Issue Field Code for Linked Issues / Subtasks
	Numeric/Date-Time Field Code Injector:
	Original estimate (minutes) - [Number] - {00068} Field Code for Current Issue Field Code for Linked Issues / Subtasks
Target field that will be set in linked issues or subtasks:	New comment - [Text] Don't overwrite target field if it's already set.

Text to be parsed in the example is: %{00127} : {visibility=Users}

Note that

• %{00127} is field code for "Transition's comment".

Example 3: Conditional execution of a post-function depending on comment visibility restriction

Any way to use this in the conditional execution of a post function? if a comment is internal, send an email to someone? or verify the comment is not internal? that type of thing. Thank you.

Assuming that your condition is on comment entered in the transition, you can use boolean expressions like these:

- A comment has been entered in transition, and the visibility is Internal.
 \${00127} != null AND \${00130} = "Internal"
- A comment has been entered in transition, and the visibility is not Internal.
 %{00127} != null AND %{00130} != "Internal"
- A comment has been entered in transition, and the visibility is public.
 %{00127} != null AND %{00130} = "Public"

Note that %{00127} is field code for Transition's comment, and %{00130} is field code for Last comment's visibility restriction.

Other examples of that functions

Write field on linked issues or sub-tasks

Page: Add and remove a single or a set of items from multi valued fields Page: Automatically become watcher of every issue blocking an issue assigned to you

Page: Automatically close resolved sub-tasks when parent issue is closed

Page: Automatically resolve an epic when all its stories are resolved

Page: Compose dynamic text by inserting field values in a text template

Page: Copy "Due date" into a date type custom field in a linked issue if it's greater than current issue's "Due date"

Page: Copy attachments from one issue to another

Page: Create a comment in sub-tasks when parent transitions

Page: Creating a Jira Service Desk internal comment

Page: Creating a Jira Service Desk internal comment on linked issues

Page: Execute transition in epic

Page: Make linked issues, sub-tasks and JQL selected issues progress through its workflows

Page: Moving sub-tasks to "Open" status when parent issue moves to "In Progress"

Page: Sum sub-task's "Time Spent" (work logs) and add it to a certain linked issue

Page: Transition sub-tasks when parent is transitioned

Update issue fields

Page: Add and remove a single or a set of items from multi valued fields

Page: Compose dynamic text by inserting field values in a text template

Page: Creating a Jira Service Desk internal comment

Page: Creating a Jira Service Desk internal comment on linked issues

Page: Make linked issues, sub-tasks and JQL selected issues progress through its workflows

Page: Moving sub-tasks to "Open" status when parent issue moves to "In Progress"

Page: Parse Email adresses to watchers list

Page: Set priority for issues that have been in a certain status for longer than 24 hours

Page: Transition linked issues in currently active sprint

Page: Transition only a sub-task among several ones

Page: Using project properties to calculate custom sequence numbers Page: Writing a comment to blocked issues when blocking issues are resolved

Add a comment

Page: Compose dynamic text by inserting field values in a text template

Page: Creating a Jira Service Desk internal comment

Page: Creating a Jira Service Desk internal comment on linked issues
