

JWT Release Notes 2.4.2

[Direct download from Marketplace](#)

This major release replaces version 2.4.1 which introduced a bug in the Send an email post function.

New Features

- The email's **priority** and **BCC recipients** can now be configured in the **"Send an email"** post function.
- Specify the **location** of the **"Message to show when validation fails"**. The message can be shown **next to any field** or at the **top of the transition screen**.
- **Insight custom fields** are now supported up to version 5.4. New custom fields will be supported in upcoming releases.
- The **"Update issue fields"** post function now supports the **Portfolio Team** field.
- You can now **update Service Desk specific fields** through JWT post functions:
 - Customer Request Type
 - Organizations
 - Customer Request Channel

Improvements

- Major Javascript performance improvements

Bug fixes

- Calculated fields occasionally prevent the execution of built-in issue actions (e.g. move/delete issues).
- **Parent's Virtual fields** cannot be set using **"Update issue fields"** post function in **standard mode**.
