Features used to implement the example

- [Boolean condition with math, date-time or text-string terms](#)

Example: Set a condition in a global transition which only applies in a certain status

To implement that condition you have to use [Boolean condition with math, date-time or text-string terms](#) with a boolean expression like this: `%{00016} != "Status1" OR (condition)`

Let us see an example: If issue is in status "**Status1**" we will show the global transition to the user only if **Priority** is "**Blocker**" and **Due Date** is set. In this example we use [Boolean condition with math, date-time or text-string terms](#) with the following configuration:

Boolean expression to be evaluated:

`%{00016} != "Status1" OR (%{00017} = "Blocker" AND {00012} != null)`

Logical connectives: or, and and not. Alternatively you can also use |, & and !.

Comparison operators: =, !=, >, >=, < and <=. Operators ~ (contains) and !~ (doesn't contain) can be used with **strings**, **multi-valued fields** and **lists**.

Logical literals: true and false. Literal null is used with "=" and "!=" to check whether a field is initialized, e.g. `{00012} != null` checks whether **Due Date** is initialized.

NUMERICAL AND DATE-TIME TERMS

Numeric and Date-Time field values: insert field codes with format `{nnnnn}`.

Due date - [Date] - {00012}

INSERT NUMERIC VALUE

Valid date-time literal formats: `yyyy/MM/dd [hh:mm]` or `yyyy-MM-dd [hh:mm]`. Time literals use format: `hh:mm`.
There is a set of [mathematical functions](#) and [time macros and functions](#) available to be used in your expression.

TEXT-STRING TERMS

Text-String field values: insert field codes with format `%{nnnnn}` or `%{nnnnn.i}` for referencing levels in cascading select fields (*i* = 0 for base level).

Priority - [Issue priority] - %{00017}

INSERT STRING VALUE

String literals: written in **double quotes**, e.g., `"This is a string literal."`

String concatenation: use operator '+' to concatenate string values, e.g., `"The summary of issue with key " + %{00015} + " is \"" + %{00000} + "\"."`

Escape character: character \ is used with characters '"', '\', 'n', 'r', 't', 'f' and 'b' to invoke an alternative interpretation.

There is a set of [string functions](#) available to be used in your expression.

Text to be parsed is: `%{00016} != "Status1" OR (%{00017} = "Blocker" AND {00012} != null)`

Note that:

- `%{00016}` is field code for "Issue status"
- `%{00017}` is field code for "Priority"

- `{00012}` is field code for numeric value of "Due Date"

Once configured, the condition will look like this:

Triggers 0
Conditions 1
Validators 0
Post Functions 11

All of the following conditions
Add condition

Only if the following boolean expression is true: `%{Issue status} != "Status1" OR (%{Priority} = "Blocker" AND {Due date} != null)`
