Parse summary for setting issue priority

On this page

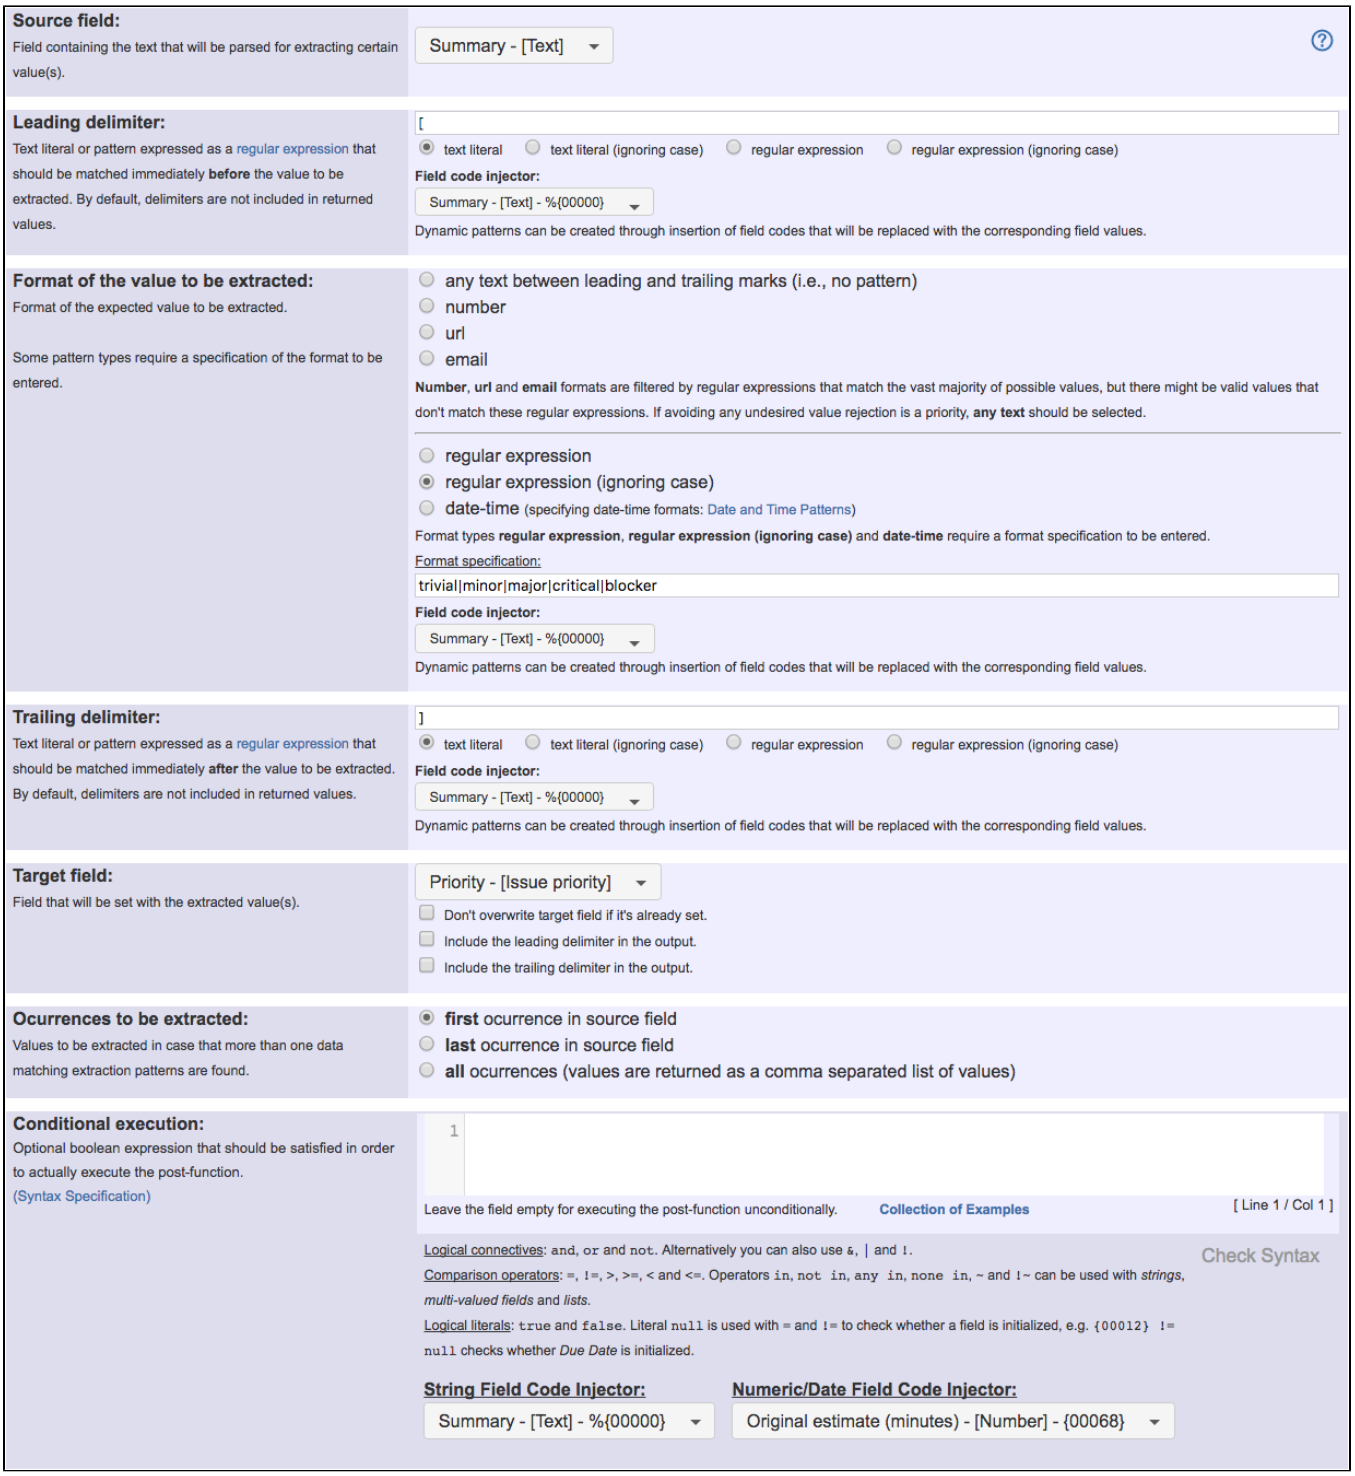
Features used to implement the example

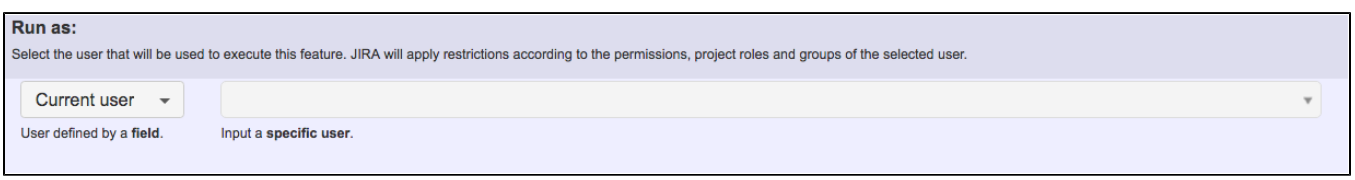
- **Parse field for extracting data**

Example: Parse summary for setting issue priority

Let's see a configuration that allows setting priority of an issue when we write the priority name between brackets in the issue summary. This can be particularly useful for issues created by email.

We insert **Parse field for extracting data** post-function in "**Create Issue**" transition (after "**Creates de issue originally**" post-function) using the following configuration:



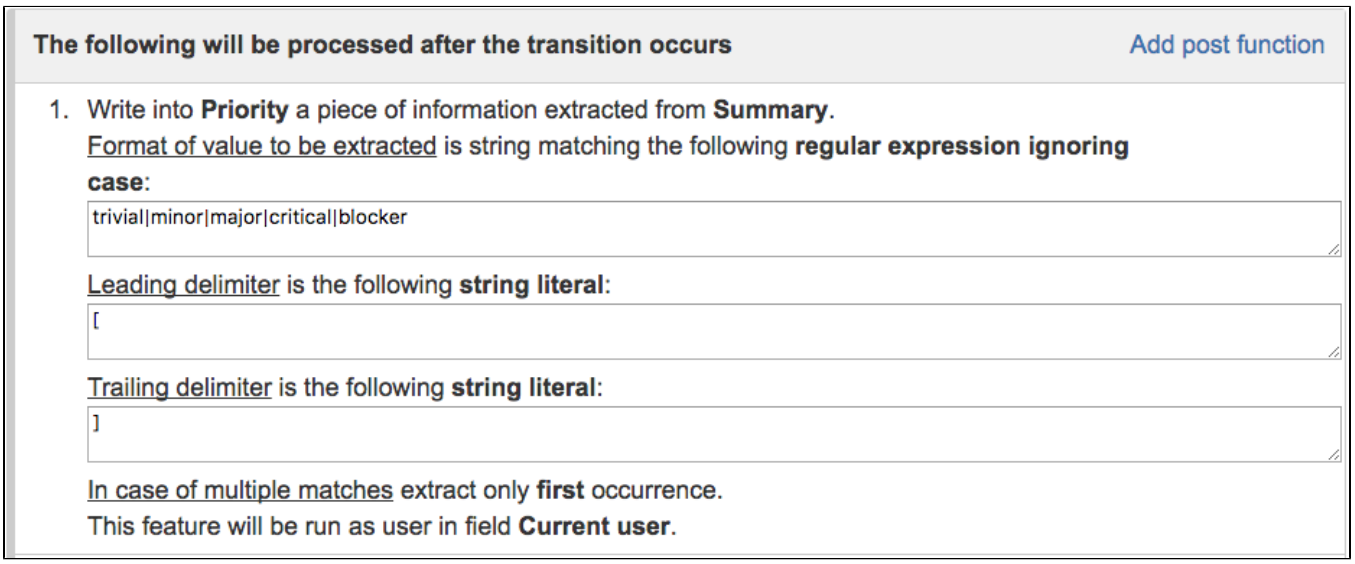


Note that:

- Value format is regular expression: `trivial|minor|major|critical|blocker`
- Leading delimiter is regular expression: **[**

- Trailing delimiter is regular expression: **]**

Once configured, post-function "**Create Issue**" looks like this:



An example of the result of the execution of this post-function:
