SINCE VERSION 2.4.8

Language configuration

The Language configuration page is located in the Jira Administration under **Add-ons Jira Workflow Toolbox Configuration**

The screenshot shows the Jira Administration interface. The top navigation bar includes 'Jira', 'Dashboards', 'Projects', 'Issues', 'Boards', 'Charts', and a 'Create' button. The 'Administration' section is active, with a search bar and tabs for 'Applications', 'Projects', 'Issues', 'Add-ons', 'User management', 'Latest upgrade report', and 'System'. The 'Add-ons' tab is selected, and the 'Jira Workflow Toolbox Configuration' page is displayed. The page title is 'Jira Workflow Toolbox Configuration' with a subtitle 'Configuration parameters for Jira Workflow Toolbox app.' A warning box states: 'WARNING: Changing the rendering language will break all the expressions where we are doing comparisons of rendered fields to string literals. Examples of affected expressions: `%{00016} = "Open"` `filterByIssueType(linkedIssues(), "Bug")`'. Below the warning is the 'General Configuration' section, which includes a 'Rendering language' dropdown set to 'English (United States)'. A description states: 'Language used for rendering string fields values in JWT features. This parameter sets the translation used for rendering the value of field codes for'. A list of affected field codes is provided:

- Issue type (%{00014})
- Issue status (%{00016})
- Status category (%{00144})
- Resolution (%{00028})
- Priority (%{00017})

 At the bottom of the configuration section are 'Save' and 'Cancel' buttons. The left sidebar shows the 'JIRA WORKFLOW TOOLBOX' section with 'Configuration' highlighted.

Usage

The configuration page is for setting the indexing language of Jira Workflow Toolbox independently from the Jira indexing language.

Using Jira Workflow Toolbox in a specific indexing language and then changing the Jira indexing language will break the JWT configurations.

Example

Using Jira Workflow Toolbox in indexing language "English" and setting the following expression:

```
%{00016} = "Open"
```

When now changing the indexing language to another one, will also change the labels.

The Language configuration page will prevent this behaviour. The indexing language can be set separately.

Jira Workflow Toolbox Configuration

Configuration parameters for [Jira Workflow Toolbox](#) app.

WARNING

Changing the rendering language will break all the expressions where we are doing comparisons of rendered fields to string literals. Examples of affected expressions: `{00016} = "Open"` `filterByIssueType(linkedIssues(), "Bug")`

General Configuration

Rendering
language:

German (Germany)

Language used for rendering string fields values in JWT features.

This parameter sets the translation used for rendering the value of field codes for

- *Issue type* (`{00014}`)
- *Issue status* (`{00016}`)
- *Status category* (`{00144}`)
- *Resolution* (`{00028}`)
- *Priority* (`{00017}`)
