JWT Release Notes 2.4.8

Direct download from Marketplace

New features

- Target issue selection in **Log work** post function
- Parser rendering language can now be changed, the default setting is the Jira indexing language.

New expressions in the parser

Function prototype	Returned value
attachmentUrls() : string list Available since version 2.4.8	Returns a string list with the URL of attachments of current issue.
attachmentUrls(issue list **issue_list**) : string list Available since version 2.4.8	Returns a string list with the URL of attachments of issues in **issue_list**.
attachmentUrls(string list **attachments_regexp**) : string list Available since version 2.4.8	Returns a string list with the URL of attachments of the current issue with names matching a regexp in **attachments_regexp**.
attachmentUrls(issue list **issue_list**, string list **attachments_regexp**) : string list Available since version 2.4.8	Returns a string list with the URL of attachments of issues in **issue_list** with names matching a regexp in **attachments_regexp**.

Bug fixes

- **Transition issues** post function view was broken after renaming the target workflow.
- Validation error messages now show up correctly at the selected field on the "Create issue" screen.
- Function **projectCategory**() now returns the project category instead of null.
- The transition of linked issues is now working without a selected Issue Link Filter in the **Transition issues** post function.
- **Clear field value** option is now working for the Watchers field.
- {Date and Time of resolution} now returns the correct date even if the issue history has no entry for issue resolution date.
- Changing a value for a selected field in the fields to update section did not show up in the configuration of the **Create issues and subtasks** post function.
- Setting epic link did not create the change history entry in the epic and threw an error in the log.
- Converting from string to number bug, the exponent 10 got cut off
