

Space Admin for Confluence Release Notes 2.2.0

Release date	04 Sep 2019
Release type	FEATURES IMPROVEMENTS
Highlights	Feature and Data Center Release

Compatibility

- We are happy to announce that Space Admin for Confluence is now officially compatible with **Confluence Data Center**!

New features

- **Rename** and **copy** [Page Templates](#)
- **Rename** [Blog posts](#)
- Deleted items can now be easily **restored**
- For better visualization, [custom icons](#) can be added to **categories** and **links** in the [Space shuttle](#)
- Customize the [Space Shuttle menu title](#) from **Categories** to "**Anything you want**"
- **Restore** [deleted items](#) without leaving the Space Admin Browser

Improvements

- The **Space Admin Browser toolbar** now **floats** when the page tree is too large
- General **UI improvements**
- [Pages](#) can now be **renamed while copying** them
- **Child pages** can now be **ordered** in **ascending** as well as **descending** order
- [Page templates](#) can be **renamed when copying** them
- **Copying** and **renaming** [page templates](#) can now be done via the **context menu**
- **Performance optimizations** for user and group pickers
- The **context menus** now **only show available actions**

Bug fixes

- The space logo was broken in the space's copy dialog
- Selecting multiple spaces and trying to copy them resulted in an error
- Not all options from the toolbar were available in the context menu
- Button highlighting did not work properly
- Displaying labels in the detail view increased the height of each tree element
- Adding labels to templates did not work properly
- The progress of long tasks was not updated correctly in some cases
