VALID UP TO VERSION 2.7.0

This condition was replaced by the **A field is/isn't initialized** in version 2.7.0. The new condition offers more flexibility and allows for **multip le fields** to be checked at once.

## Purpose

It's a condition for doing any of the following checks:

- A field is **initialized**.
- A field is **not initialized**.

For **cascading select** fields **both levels** are required to be initialized.
