JWT Release Notes 2.7.1

Direct download from Marketplace

Bug fixes

- The function **dateTimeToString()** generated an error
- All functions returning users now **exclude inactive users**
- Conditions based on JQL expressions did not work properly when a query included an ORDER BY clause
- Multi-level cascading select fields from Sourcesense (3rd party app) could not be set
- The red asterisk in the **Fields required or changed validator** was not shown for some fields
- **Fields required or change validator** did not work properly for fields including a comma in their names
- **Message to show at failed validation** in validators was not shown next to the specified field in the create transition
- Performance improvements for the **timeInStatus()** function
- Conditions **Only users in a field/Except users in field** evaluated against the changed issue instead of the original issue
