Post functions

Post functions can be used to **automate tasks** and **ensure** consistent **data quality** by eliminating or at least minimizing human error.

Jira ships with built-in **post functions** but those are limited. JWT extends that list by offering **custom post functions**.

Available post functions

Jump right in and configure any of the available post functions listed below. Each post function comes with built-in examples.

If you are just looking for some **inspiration**, head over to our large use case library and check out our Workflow use cases!

Post function	Short description	Label
Add comment	Add a **comment** to an issue.	STAFF PICK
Add or disable option in (multi-) select list, radio button, or checkbox field	**Add** a new **option**, or **disable** an existing one in a **(multi-) select list**, **rad io button**, or **checkbox** custom field.	
Add or disable option in cascading select list field	**Add** a new **option**, or **disable** an existing one in a **cascading select** list custom field.	
Add or remove watchers	**Add** or **remove watchers** based on field values, project roles or groups.	
Assign to project role	**Assign** the issue to a specific user in a **project role**.	
Copy cascading select list value	**Copy** the **value** of a **cascading select list** field into another field.	
Copy excerpted value	**Copy an excerpt** of an issue field using leading and trailing delimiters.	
Copy field values from linked issues or subtasks	**Copy** the field values from one or multiple **linked issues** or **sub-tasks**. Values can also be aggregated.	STAFF PICK
Copy field values from multiple issues	**Copy** the **field values** from one or multiple issues returned by a **JQL query** or an **issue list**. **Values** can also be **aggregated**.	
Copy JWT project property	**Copy** the **value** of a **project property** to a field.	
Copy JWT user property	**Copy** the value of a **user property** to a field.	
Create issue	**Create** one or multiple **issues** or **sub-tasks**.	STAFF PICK
Create issue link	**Create** one or multiple **issue links**.	STAFF PICK
Delete issue link	**Delete one** or **multiple** issue **links**.	
Execute remote action		
Format field value	**Format** a field containing **text**.	
Log work	**Log work** on **one** or **multiple issues**.	
Move issue	Move issues to other **projects**, **statuses** or **types**.	STAFF PICK

Regular expression renderer	**Replace** the **substrings** of a field value, matching a **regular expression**, with values from another field.	
Send email	Send an **email** with custom **content**.	STAFF PICK
Set or create JWT project property	Set or optionally **create** a **JWT project property.**	
Set or create JWT user property	Set or optionally **create a user property**.	
Transition issue	**Transition any issue** to any available target status.	STAFF PICK
Update field based on rules	**Update** a **single** issue **field** according to a set of **rules**.	STAFF PICK
Update linked issue or sub-task	Update **one** or **multiple issue fields** in **linked issues** or **sub-tasks**.	
Update or copy field values	Update **one** or **multiple issue fields**.	STAFF PICK
