

# JWT JQL functions

JWT provides **JQL functions** to query **on issues values**, **user properties** or **project properties**. These functions complement conditions, validators, and post functions provided by the app.

Function	Short description	Output	Label
<a href="#">issueSelection()</a>	Returns issues that satisfy both a <b>JQL query</b> and a <b>JWT logical expression</b>	ISSUE LIST	STAFF PICK
<a href="#">linkedTo()</a>	Returns issues <b>linked to</b> other issues satisfying a <b>JQL subquery</b>	ISSUE LIST	STAFF PICK
<a href="#">projectsWhereDateProperty()</a>	Returns projects with specific <b>properties</b> containing a <b>date</b>	TEXT LIST	
<a href="#">projectsWhereNumberProperty()</a>	Returns projects with specific <b>numeric properties</b> .	TEXT LIST	STAFF PICK
<a href="#">projectsWhereTextProperty()</a>	Returns projects with specific <b>text properties</b> .	TEXT LIST	
<a href="#">usersWithDateTimeProperty()</a>	Returns users with specific <b>date</b> or <b>date-time</b> properties.	TEXT LIST	STAFF PICK
<a href="#">usersWithNumericProperty()</a>	Returns users with specific <b>numeric</b> properties.	TEXT LIST	
<a href="#">usersWithProperty()</a>	Returns users with specific <b>properties</b> .	TEXT LIST	
<a href="#">usersWithRoleInProject()</a>	Returns users with a specific <b>role</b> in a specific <b>project</b>	TEXT LIST	
<a href="#">usersWithTextProperty()</a>	Returns users with specific <b>text properties</b> .	TEXT LIST	

The result is **not what you expected**? The number of returned issues feels **too low**?

By default, the **maximum number** of issues that will be returned by the JQL subquery, and thus can be processed by the logical expression is **1 000**.

To ensure the performance of your entire Jira instance, we limit the execution of the JQL function in terms of **issue count** and **execution time**. Please refer to your admin if you need to change the [configuration](#).

If you still have questions, feel free to refer to our [support](#) team.
