

# Manual trigger

The **Manual** trigger executes a rule whenever the "Run" button  is clicked. **No events or schedules needed!**

You can trigger a rule directly from the **rule detail view** or the **rule navigator**.

## Manual trigger configuration

### Run as

Select the user that will be used to execute the rule. It can be chosen from one of the following options:

- Current user
- Selected user

The manual trigger is the **best choice** if you want to have **full control** over a rule execution. Typical use cases include recurring **housekeeping tasks** or **one-off actions**.

Can't execute the manual trigger? Make sure to check out the [rule statuses page](#).

## Use cases and examples
