

Create issue action

Create one or multiple **issues**.

The create issue action is **the only** action available for all trigger types.

Create issue configuration

Issues to be created

Select whether **One issue** or **Multiple issues** should be created. When "**Multiple issues**" is selected, the issue will be created using one of the following options:

- **JQL Query**
- **Parser expression** - valid input arguments are String Lists, Issue Lists or Date/Mathematical expressions.

Issue type

Select the **issue type** for the issue(s) that should be created.

Project selection

Select the target project the issues will be created in. It can be chosen from one of the following options:

- **Selected project**
- **Project from parsed expression**
- **Project from event** - not available for Project, System or Scheduled triggers.
- **Project from issue selector** - this option is available if the action is nested in the selector.

Project

Select one or more projects to limit the execution of the rule.

Additional options

Enable email notifications

Choose whether an email notification should be sent according to the applicable notification scheme or not.

Run as

Select the **user** that will be used to **perform this action**.

Fields

Summary

Define the **summary** for the issue(s) that will be created. It can be chosen between the Basic text, Advanced text and Mixed [parsing mode](#).

Description

Define the **description** for the issue(s) that will be created. It can be chosen between the Basic text, Advanced text and Mixed [parsing mode](#).

Inherit fields from

Inherit field values from other issues, for those fields that have not been set manually.

If you select **Rest of the fields**, all field values from the selected issue will be inherited (copied over).

Fields

Set **dedicated values** for specific fields.

You can choose between the following two options:

- **Selected value** - set a dedicated value.
- **Value returned by pared expression** - use the full power of the [expression parser](#) to specify the value to be set.

Links

Inherit issue links

Inherit links from other issues, for those issue links that have not been set in the following section.

Issue links

Set additional **issue links** by setting an **Issue link type** and **specifying the issue to be linked**.

Use cases and examples

Title	Automated action	JWT feature	Label
Add sub-tasks to an automatically created issue	Create issue action	 	
Create sub-tasks depending on selected values in a custom field	Create issue action		
Add sub-tasks to an issue on creation	Create issue action		
Manually create test issues	Create issue action
