

Issue event

The **Issue event** trigger executes a rule whenever a **specified issue event** occurs.

Issue event configuration

Simply select one of the existing **Jira issue** events. The rule will be executed when that event is being picked up by the automation rule.

No further configuration is needed at this point.

List of typical Jira issue events

A typical list (which may vary with the **Jira instance**) will look like the one below:

- Generic Event
- Issue Archived
- Issue Assigned
- Issue Closed
- Issue Comment Deleted
- Issue Comment Edited
- Issue Commented
- Issue Created
- Issue Deleted
- Issue Moved
- Issue Reopened
- Issue Resolved
- Issue Restored
- Issue Updated
- Issue Worklog Deleted
- Issue Worklog Updated
- Work Logged On Issue
- Work Started On Issue
- Work Stopped On Issue

It is **highly recommended** to further limit the execution of the rule using [automation conditions](#) (e.g. to limit the execution to a single project).

Use cases and examples

Title	Automated action	JWT feature	Label
Copy excerpted value from new comments	Update field action		
Copy the parent issue comments to its sub-tasks	Add comment action		
Send email when a field is updated	Send email action		
Create issue link when issue is created	Create issue link action		

Add sub-tasks to an automatically created issue	Create issue action	 
Reindex linked issues	Reindex issue action	
Track issues mentioned in comments	Create issue link action	
Create sub-tasks depending on selected values in a custom field	Create issue action	
Add sub-tasks to an issue on creation	Create issue action	
Re-open issue when a new comment is added	Transition issue action	
Automatically assign issues to your team	Assign issue action
