

Delete issue link action

This action will automatically **delete** defined **issue links**.

Delete issue link configuration

Below you will find a detailed description of each parameter needed to configure the action.

Issue link type(s)

Choose an issue link type or multiple link types. If left **blank**, **all issue link types** will be selected.

Issue selection

Specify the issues that you want to delete the links to (destination issues). Choose among these options:

- **All Issues** - all outgoing links will be deleted.
- **Quick filter** - quickly define issue types or statuses.
- **Issue from** event - the issue triggering the rule.
- **Parent issue from event** - only available if the issue triggering the rule is a sub-task.
- **JQL Query**- links to all issues returned by a JQL query will be deleted.
- **Issue list** expression - link issues being returned by an [issue list expression](#).
- **Issue Key** - specify an issue key to be linked.

Only issue links to **matching issues** will be deleted.

Additional options

Delete issue links within the same project only

When selected, Issues at both sides of an issue link must **belong** to the **same project**. Otherwise this action will be skipped.

If you still have questions, feel free to refer to our [support](#) team.
