

# monthToString()

This function returns a **text** with the **name of the month** for a given date-time, in a certain **time zone**, and in a certain **language**.

## Syntax

```
monthToString(timestamp, timeZone, language) #Output: Text
```

## Examples

Parser Expression	Description
<pre>monthToString({issue.created}, LOCAL, USER_LANG)</pre>	<p>This example returns the <b>month</b> of the <b>issue creation date</b> as text.</p> <p>Given an issue that was created on <b>March 25th, 2020 23:15:30</b> and the user's Jira language being set to <b>English</b>, the returned value is <b>March</b>.</p>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
timestamp	NUMBER	The parameter must be valid <b>timestamp</b> . Usually this value is retrieved from a <a href="#">field</a> (e.g. due date, created date).
timeZone	TIMEZONE	The <b>time zone</b> used for the conversion.
language	LANGUAGE	The <b>language</b> used for the conversion.

## Output

This function returns a [TEXT](#)
