

issueSecurityLevel()

This function returns the name of an **issue security level** with a given **ID**.

Syntax

```
issueSecurityLevel(id) #Output: Text
```

Examples

Parser expression	Description
issueSecurityLevel(10000)	This example returns a text with the corresponding name of the issue security level with the ID 10000 . e.g. Confidential

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
id	NUMBER	A valid issue security level ID.

Output

This function returns a **TEXT**.

If there is no issue security level with the given ID, the function returns **NULL**.

Use this function to ensure expressions will continue to work after **renaming** resolutions:

Will continue to work after security level name update ✓	Will fail after security level name update ✗
<code>%{issue.securityLevel} = issueSecurityLevel(10000)</code>	<code>%{issue.securityLevel} = "Confidential"</code>

Use cases and examples

Use case	JWT feature	Workflow function	Field type	Automated action	Parser functions
Set issue security level depending on reporter		Update field based on rules			issueSecurityLevel()
