

# getIssuesFromProjects()

This function returns an **issue list** with all issues from the specified projects.

This is a legacy function.

Use [issuesFromJQL\(\)](#) instead to greatly **reduce** the **calculation** time.

## Syntax

```
getIssuesFromProjects(projects) #Output: Issue list
```

## Examples

Parser expression	Description
<pre>getIssuesFromProjects ( "CRM, HT" )</pre>	<p>This example returns an <b>issue list</b> of all issues in project <b>CRM</b> and <b>HT</b>.</p> <p>This function can make your expression run slowly due to the high number of issues retrieved and needing to be filtered.</p> <p>The alternative would be:</p> <pre>issuesFromJQL(project in (CRM, HT))</pre>

## Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projects	TEXT	A project h or project name. Several projects can be provided as comma separated list.

## Output

This function returns an

ISSUE LIST

## Use cases and examples

### Use case
