

getIssuesFromProjects()

This function returns an **issue list** with all issues from the specified projects.

This is a legacy function.
Use `issuesFromJQL()` instead to greatly **reduce** the **calculation** time.

Syntax

`getIssuesFromProjects(projects)` #Output: Issue list

Examples

Parser expression	Description
<code>getIssuesFromProjects ("CRM, HT")</code>	This example returns an issue list of all issues in project CRM and HT. This function can make your expression run slowly due to the high number of issues retrieved and needing to be filtered. The alternative would be: <code>issuesFromJQL(project in (CRM, HT))</code>

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
projects	TEXT	A project h or project name. Several projects can be provided as comma separated list.

Output

This function returns an

ISSUE LIST
