isActive()

This function checks if a user is active. You can specify **user names**, **group names** or **role names**.

If you specify more users (e.g. as part of a role), this function will return **`true`** only if **all users** in the list are active.

Syntax
`isActive(user) #Output: Boolean`

Examples

Parser expression	Description
`isActive(%{issue.components.leads})`	This example returns **`true`** if all users who are **component leads** in the current issue's project are active.
`isActive(%{issue.assignee})`	This example returns **`true`** if the **assignee** is active.

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
`user`	TEXT	Text containing a valid user, group or project role name.

Output

This function returns a BOOLEAN

Use cases and examples

Use case	JWT feature	Workflow function	Field type	Automated action	Parser functions
Add watchers ignoring inactive users		Update or copy field values			usersInGroup() isActive() toString() filterByPredicate()
