

userEmail()

This function returns a **text** with the **email** address of a given user.

Syntax

```
userEmail(userName) #Output: Text
```

Examples

Parser expression	Description
<pre>userEmail(%{system.currentUser})</pre>	This example returns the email address of the current user, e.g.: admin.istrator@test.com

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
userName	TEXT	Text containing a valid user name.

Output

This function returns a

Variant for **multiple users**.

Syntax

```
userEmail(userNames) #Output: Text list
```

Examples

Parser expression	Description
-------------------	-------------

```
toLowerCase(toString(userEmail(toStringList(%  
{issue.watcher}))))
```

This example returns a **text list** with the email addresses of the **current issue's watchers**, e.g.:

admin.istrator@test.com, d.jones@test.com

To achieve this, the following functions are used:

- [toLowerCase\(\)](#)
- [toString\(\)](#)
- [toStringList\(\)](#)

Additional information

Parameters used in this function

Parameter	Input (data type)	Description
userNames	TEXT LIST	Comma-separated list of user names.

Output

This function returns a

TEXT LIST
